

PRESS RELEASE

Energy Efficient Air Conditioning

All Seasons Hire can offer effective cooling solutions that are energy efficient and keep carbon footprint down.

As a leading Climate Control business All Seasons Hire aim to always keep up with the latest developments in the Heating and Cooling industry. With increasing pressures on businesses to be aware of their effect on the environment and to keep their carbon footprint down, All Seasons Hire have moved to help.

When it comes to providing Temporary Cooling within a building there are three typical options, Ventilation, refrigerant Air Conditioning and Evaporative Cooling. The choice made can have a significant effect on the amount of electrical energy used. The most effective Temporary Cooling Systems are refrigerant Portable Air Conditioners, however these systems have relatively high running costs. The option with the lowest running costs is Ventilation Cooling Fans, which are effective for most of the year but cannot handle the increased temperatures of summer. The final option of Portable Evaporative Coolers can provide Air Cooled to a comfortable temperature using less than 15% of the electrical energy of a refrigerant Portable Air Conditioner.

All seasons Hire provides Air Conditioning, Portable Chillers, Portable Boilers, Commercial Refrigeration and Heating Solutions for all types of business environments including small medium and large Events and Exhibitions, Server Room Air Conditioning, Disaster Recovery and any environment requiring Temporary Air Conditioning, Heating or Drying
