

PRESS RELEASE

Evaporative Cooling For Warehouse

All Seasons Hire have recently supplied and installed two Breezair Industrial Evaporative Coolers to Cool a warehouse area. Between them the two Evaporative Coolers will be able to Cool a 240m² area of the warehouse. These units were ideal for this application as there was no way that the hot Air that is produced by normal Air Conditioning Systems could be vented outside, and Evaporative Coolers do not produce heat that needs to be vented.

All Seasons Hire Evaporative Coolers Cool air through the simple process of Evaporation, for this the Cooling Units are filled with a supply of water and need to be topped up to continue Cooling. Alternatively a hose pipe can be run from a tap to the Evaporative Cooler to provide a continuous source of water. As water Evaporates it Cools whatever it is in contact with, in the case of Evaporative Coolers this is the Air being passed through the machine via a Fan.

All seasons Hire provides Air Conditioning, Portable Chillers, Portable Boilers, Commercial Refrigeration and Heating Solutions for all types of business environments including small medium and large Events and Exhibitions, Server Room Air Conditioning, Disaster Recovery and any environment requiring Temporary Air Conditioning, Heating or Drying
