

## PRESS RELEASE

### Heater Hire Levels Increasing. Is it Really Summer?

Even with increasing temperatures this summer, heater hire levels are on the up and up.

Despite being well into summer All Seasons Hire has been seeing an increasing trend in enquiries for Heater Hire. The reason for this trend is surprisingly not because this summer's weather is so poor, but because of increased requirements from the Specialist Hire Industry.

These include such needs as load testing for newly installed Fixed Air Conditioning. This is where Heaters are hired in once a new Fixed Air Conditioning System has been installed, to increase the temperature in the area to make sure the Fixed Air Conditioning System can cope with high ambient temperatures.

Another specialist requirement that has pushed up enquiries for Heating Hire over the summer months is for assistance in building Drying. Heating is needed to increase the ambient temperature of areas where Drying is taken place as it dramatically improves the time it takes for Drying to be completed. This can have the effect of speeding up the entire construction process.

All Seasons Hire offer a wide range of Heating Hire products including, Fan Heaters, Infra Red Heaters, Indirect Fired, Direct Fired and Oil filled Radiators. This range can be powered by a wide range of fuels including electric, (110v, 230v, three phase) gas and oil.

If a more powerful solution is needed All Seasons Hire offers a wide range of Portable Boilers for Hire. These Mobile or Containerised Boiler units can provide both Heating and Hot Water, with All Seasons Hire offering a full Fuel Management Service.
