

PRESS RELEASE

All Seasons Hire Re Heat University!

When one of the UK's largest building companies needed specialist heating equipment at a North London University, they called on All Seasons Hire to provide the perfect solution.

During a major expansion program, the Universities existing boiler house was due to be demolished, the plan was to replace it with a new energy efficient boiler plant which will be built into the newly extended building.

This meant that over a 26 week period, unless a solution could be found, the universities main campus would be without a hot water supply.

All Seasons Hire carried out a detailed site survey, and then proposed the supply of a 115kW portable packaged hot water plant room. Due to the length of the hire the University requested a natural gas fired heating system. All Seasons Hire were more than happy to provide a gas fired unit, something which is available as standard from All Seasons Hire.

All Seasons Hire advised the client where to connect into the existing water pipe work; the experienced installation team provided and fitted the required flanges and fittings. The Portable Boiler arrived on site complete with all required flexible hoses and pumps.

Installation was simple and carried out with the minimum of fuss ensuring that the university kept its hot water supply on tap with the minimum of disruption. All Seasons Hire has a modern fleet of hire equipment including Portable Air Conditioning, Mobile Chillers, Portable Heaters and Mobile Boilers ranging from 30kW to 550kW. They are capable of delivering large cooling and heating projects across a wide range of business sectors and specialist applications.
